

BioRA Ring

An release agent designed for steel molds

- withstands temperatures up to 60 degrees Celsius
- contains a corrosion inhibitor
- quick action, molds can be filled immediately after application
- low viscosity of the product, easy to apply
- when used, it effectively / easily allows you to reflect rings with the so-called circles

Recommended for the production of prestressed ceiling elements. Spreading / rubbing the agent on the mold significantly improves the quality of the finished elements. Use a 0.06 steel nozzle for application.
