

BioRA Economy

Release agent for molds made of steel or plywood.

- withstands temperatures up to 60 degrees Celsius
- contains a corrosion inhibitor - deaerates concrete surfaces
- quick action, forms can be filled immediately after application
- low viscosity of the product, easy to apply
- for use in the production of less demanding concrete elements

Recommended for the production of concrete elements that do not require the aesthetic appearance of the surface / products buried in the ground, etc.

Spreading / rubbing the agent on the mold significantly improves the quality of the finished elements.

Use a 0.06 steel nozzle for application.
